

MRSI-A-L **ACTIVE ALIGNER**

MRSI Mycronic has been serving optoelectronic customers for the past 40+ years and understands their requirement to scale efficiently in today's fast-paced marketplace.

Key Features & Options

- High efficiency: Achieved by adopting linear motors, an intelligent motion control system, and an optimized alignment algorithm
- High Stability: Achieved by installing a two-level vibration isolation control system to ensure long-term alignment stability with minimal drift
- Modular Design: Easy to configure for different applications, leveraging a standard 6-axis alignment system and multiple mature functional modules
- Unique Intelligent Open Software Platform: Offers an easy-to-use programmed sequence editor for controlling all processes and settings

Applications

- Transceivers & CPO
- Silicon Photonics
- AWGs
- LiDAR
- Integrated Optics
